

# FORMULATION DESIGN TOOL – COMING SOON

## Features

- Selected Expert Consultants can design the formulations for product development .
- The theoretical test result such as Hardness, Specific Gravity, Ash Content, Rubber Content can be seen immediately which will minimize DoE.
- The Compound cost can be viewed and optimized immediately.
- The average raw material price is uploaded by chemical suppliers & also the experts can suggest their rates too.
- The selected test labs can make lab trials & submit their reports in the portal which can be compared.
- The compounders can submit their trial reports.
- The benchmarked developed formulation & process conditions will be used in mass production.

## Advantage

- Quick material cost savings with optimum performance.
- Can easily track the compound cost due to fluctuating Raw Material market.
- Reduces the product development time & cost.
- Data can be used for Polymer Structure Property Research activities.
- An opportunity for new comers to supply quality products.
